MINING ENGINEERING SERVICES

WEIR has significant mining engineering and operating expertise to capably undertake mining projects in coal, metals and industrial minerals from exploration, including geologic modeling and reserve and resource evaluation, to development and exploitation. WEIR's mining engineering capabilities range from conceptual mine design to detailed mine planning, incorporating review, evaluation and design of all aspects of mine development, including material handling, water management and ventilation.

Mining engineering services have been provided to mining companies, financial institutions, and project developers throughout the mining regions of the United States and internationally.
